

Chapter 3: Algebraic Expressions

Lesson Index & Summary

Section 1: Monomials

Index

- Base *Screen 6*
- Coefficient *Screen 4*
- Constant *Screen 2*
- Degree *Screen 7*
- Expanded Form *Screen 6*
- Exponent *Screen 6*
- Exponential Form *Screen 6*
- Exponential Notation *Screen 6, 7*
- Monomial *Screen 2*
- Standard Form *Screens 4, 6*
- Variable *Screen 2*

Key Topics & Formulas

- ◆ Definitions: (*Screen 2*)
 - A **variable** is a letter or symbol used to represent a quantity that is unknown or can change. The letters x and y are the symbols most commonly used as variables but any letter can be used. Variables are also sometimes referred to as "unknowns."
 - A **constant** is a quantity that does not change in value.
 - A **monomial** is a constant, a variable, or the product of constants and variables. A monomial never involves addition, subtraction, radicals of variables, or variables in a denominator.
- ◆ The **degree** of a monomial with only one variable is simply the degree of that variable. (*Screen 7*)
 - The degree of x is 1 since $x = x^1$.
 - The degree of a constant is 0.

(*Screen 7*)

Chapter 3: Algebraic Expressions

Lesson Index & Summary

Section 2: Basic Rules for Exponents

Index

- Exponent, definition *Screen 2*
Exponent, rules/properties *Screen 2, 3, 7*
Order of Operations, now including exponents *Screen 11*

Key Topics & Formulas

- ◆ Definition of Exponents: $x^n = \overbrace{x \cdot x \cdot x \cdots x}^{n \text{ of these}}$ (*Screen 2*)
- ◆ Rules of Exponents:
 - Rule 1:** $x^1 = x$, for any real number x . (*Screen 2*)
 - Rule 2:** $x^m \cdot x^n = x^{m+n}$, for any real number x and any integers m and n . (*Screen 2*)
 - Rule 3** $(xy)^n = x^n \cdot y^n$, for any real numbers x and y and any positive integer n . (*Screen 3*)
 - Rule 4:** $(x^m)^n = x^{m \cdot n}$, for any real number x and any integers m and n . (*Screen 3*)
 - Rule 5:** $\left(\frac{x}{y}\right)^n = \frac{x^n}{y^n}$, for any x and y , $y \neq 0$, and any integer n . (*Screen 7*)
- ◆ The order of operations is as follows: (*Screen 11*)
 2. Simplify within parentheses.
 3. Simplify any exponents.
 4. Perform multiplication and division from left to right.
 5. Perform addition and subtraction from left to right.
- ◆ Some find it helpful to keep in mind that negatives are equivalent to multiplication by -1 :
 $-A = (-1) \cdot A$. (*Screen 13*)
- ◆ A negative number raised to an even exponent is positive, but a negative number raised to an odd exponent is negative. (*Screen 13*)
- ◆ The negative sign is not part of the base unless it is included in parentheses. (*Screen 13*)

Chapter 3: Algebraic Expressions

Lesson Index & Summary

Section 3: Additional Rules for Exponents

Index

Elevator Rule *Screen 11*

Exponent, rules/properties *Screen 5*

Negative exponent *Screen 4*

Key Topics & Formulas

- ◆ More Rules of Exponents:

Rule 6 (Cancellation): $\frac{x^m}{x^n} = x^{m-n}$, for any real number x , $x \neq 0$, and any integers m and n .

(Screen 2)

Rule 7: $x^0 = 1$ for any real number $x \neq 0$. *(Screen 3)*

Rule 8 (Definition of Negative Exponent): $x^{-n} = \frac{1}{x^n}$, for any real number x , $x \neq 0$, and for any integer n . *(Screen 4)*

(Screen 5)

Properties of Exponents	
1	$a^1 = a$
2	$a^m \cdot a^n = a^{m+n}$
3	$(ab)^n = a^n \cdot b^n$
4	$(a^m)^n = a^{m \cdot n}$
5	$\left(\frac{a}{b}\right)^n = \frac{a^n}{b^n}$
6	$\frac{a^m}{a^n} = a^{m-n}$
7	$a^0 = 1$
8	$a^{-n} = \frac{1}{a^n}$

- ◆ Remember that the **elevator rule** only works when the numerator and the denominator are both completely factored as products; **if there is any addition or subtraction in the fraction, do NOT use this technique.** *(Screen 11)*

Chapter 3: Algebraic Expressions

Lesson Index & Summary

Section 4: From Words to Algebraic Expressions

Index

- Algebraic equations *Screen 5*
- Algebraic inequalities *Screen 5*
- Relational symbols *Screen 5*

Key Topics & Formulas

- ◆ Common word expressions that indicate algebraic relationships:

is equal to	=	
is not equal to	≠	
is less than	<	
is less than or equal to	≤	
is greater than	>	
is greater than or equal to	≥	<i>(Screen 5)</i>

- ◆ Common word phrases and their algebraic equivalents: *(Screens 9-10)*

$ \left. \begin{array}{l} x \text{ plus } 8 \\ 8 \text{ added to } x \\ x \text{ increased by } 8 \\ 8 \text{ more than } x \\ \text{the sum of } x \text{ and } 8 \\ \text{the total of } x \text{ and } 8 \\ x \text{ and } 8 \text{ together} \end{array} \right\} x + 8 $	$ \left. \begin{array}{l} 8 \text{ times } x \\ \text{the product of } 8 \text{ and } x \\ x \text{ multiplied by } 8 \\ 8 \text{ multiplied by } x \\ 8 \text{ } x\text{s} \end{array} \right\} 8x $
$ \left. \begin{array}{l} x \text{ minus } 8 \\ 8 \text{ subtracted from } x \\ x \text{ decreased by } 8 \\ 8 \text{ less than } x \\ 8 \text{ fewer than } x \\ \text{the difference of } x \text{ and } 8 \end{array} \right\} x - 8 $	$ \left. \begin{array}{l} x \text{ divided by } 8 \\ \text{one-eighth of } x \\ \text{an eighth part of } x \\ \text{the quotient of } x \text{ and } 8 \\ \text{the ratio of } x \text{ and } 8 \end{array} \right\} \frac{x}{8} \text{ or } x \div 8 \text{ or } \frac{1}{8}x $

Chapter 3: Algebraic Expressions
Lesson Index & Summary

$\left. \begin{array}{l} \text{is less than 8} \\ \text{is smaller than 8} \end{array} \right\} < 8$	$\left. \begin{array}{l} \text{equals 8} \\ \text{is 8} \\ \text{is equal to 8} \end{array} \right\} = 8$
$\left. \begin{array}{l} \text{is greater than 8} \\ \text{is more than 8} \end{array} \right\} > 8$	
$\text{is greater than or equal to 8} \} \geq 8$	$\left. \begin{array}{l} \text{does not equal 8} \\ \text{is not 8} \\ \text{is not equal to 8} \end{array} \right\} \neq 8$
$\text{is less than or equal to 8} \} \leq 8$	

Chapter 3: Algebraic Expressions
Lesson Index & Summary

Section 5: Evaluating Expressions

Index

Evaluate *Screen 2*

Key Topics & Formulas

- ◆ **Evaluate** means to substitute the given number for the variable and then simplify the expression.

Example A: Evaluate the monomial $3x^2$ when $x = 5$. (*Screen 2*)

$$\text{If } x = 5, \text{ then } 3x^2 = 3(5)^2 = 3 \cdot 25 = 75.$$

Example D: Evaluate $a - b + 7$ when $a = 14$ and $b = 3$. (*Screen 3*)

$$\text{Replace } a \text{ with } 14 \text{ and } b \text{ with } 3: a - b + 7 = 14 - 3 + 7 = 18.$$

- ◆ When you substitute a negative number for a variable, use parentheses. (*Screen 4*)

Chapter 3: Algebraic Expressions

Lesson Index & Summary

Section 6: Polynomials

Index

Binomials *Screen 4*
Combining like terms *Screen 4*
Degree of a polynomial *Screen 6*
Like terms *Screen 4*
Monomial (revisited) *Screen 2*
Polynomial *Screen 2*
Term *Screen 4*
Trinomials *Screen 4*

Key Topics & Formulas

- ◆ A **polynomial** is a monomial or the sum or difference of any number of monomials. (*Screen 2*)
- ◆ Like terms can be added. This is called **combining like terms**. When you combine like terms, you add the coefficients of each term and leave the variable parts unchanged. Thus,
 $5x^2y - 9xy + 7x^2y - 4 = 12x^2y - 9xy - 4$. (*Screen 4*)
- ◆ We saw earlier that the **degree of a monomial** with only one variable is simply the degree of that variable. When a monomial has more than one variable, the degree of the monomial is the sum of the exponents of all the variables of the monomial. (*Screen 6*)
- ◆ The **degree of a polynomial** in standard form is the highest degree of any of its terms (assuming its like terms have all been combined). (*Screen 6*)

(*Screen 7*)

A Word to the Wise

Always combine like terms before deciding the degree of a polynomial.
